Creating / loading a new setup

To start, a setup need to be created - newly from scratch - or as best-practice - an existing one should be copied and modified. Setups can also be imported from other projects / project-files.

This document describes the inital step of defining a robot task, here creating a setup, in which the the task to be automated can be defined and the process resuls simulated.

The following options exist:

- creating a (new!) setup
- duplicating an existing setup
- importing an existing setup that can be modified later

The video is embedded by YouTube and only loaded and played from there when you click on the play button. From then on, the privacy policy of Google applies.
